

Onda

Poly/Plastic

Gently wipe off any spill or debris. After, dip a lint-free cloth into a mild soap and water mixture. Scrub gently over the stained area. For tougher stains, you may use distilled vinegar and a lint-free cloth. Repeat if needed.

Copper-Infused Mesh

To prevent overall soil, frequently vacuum and lightly brush the best to remove dust and grime buildup. Spot clean with mild soap and water. Infrequent use of a 1:100 bleach to water solution can be used for disinfection of the mesh. The accumulate wet contact time should be limited to a maximum of two hours over the life of the chair. Regular bleach cleaning of this mesh is not recommended.

The following cleaners have been successfully used with Genie Copper Mesh®. Please note, Via Seating does not endorse any of these cleaners. For details, please contact these cleaning product manufacturers directly.

Mesh

Mix mild soap and warm water together and using a lint-free cloth, damp it a little bit into the mixture. Dab gently where the stain is located. Use a different, dry, lint-free cloth to dry the area. Repeat if needed.

Casters

To get the most out of your casters, it is always good to keep them as clean as possible. Once a month, gently flip your chair over and carefully use tweezers to remove all dirt/hair/debris out of the creases of the caster. Use a lint-free cloth with your preferred cleaning agent and clean the caster thoroughly. Thoroughly dry the caster with another lint-free cloth after.
