# Genie Flex

The award-winning Genie<sup>®</sup> series designed by Henner Jahns gets an upgrade with Genie Flex. This latest task chair uses a robust Thermoplastic Polyurethane (TPU) material that is remarkable. It is the same material used in athletic running shoes and as a rubber replacement in engineering seals for heavy duty industrial applications. Visualizing its use here in a chair, you experience exceptional support and comfort with 4-way stretch in the material. It is abrasion/scratch, grease and oil stain resistant and is bleach cleanable. The sustainable TPU is 100% chlorine and PVC free and is 100% recyclable!

Genie flex is warranted for 12 years 24/7 i.e. all components, including foam seat & TPU material.

Cover artwork inspired by Banksy.
